Subject Index

abridged trial fields, 172
adjoint problem, 125
Airy equation, 363, 370, 372, 375, 396, 423
Airy function, 362, 363, 371, 376, 379, 434
analytic continuation, 343
anisotropic elastic material, 373
annulus of maximal conductivity, 109
annulus of minimal conductivity, 108
arithmetic mean, 53, 62, 313
attainability of the convex envelope, 155, 157, 411
attainability, counterexample, 156
attainability, min-max variational problem, 157
augmented functional, 83, 123, 124, 126, 136, 474
auxiliary local problem, 127
averaging operator, 5, 48

bar of extremal torsion stiffness, 110
bar of extremal torsion stiffness, multimaterial design, 111
beam, boundary value problem, 4
beam, homogenized equation, 6
biharmonic equation, 373
bilinear form, diagonalization, 128, 133
biomaterials, xxiii, xxiv
boundary of ellipticity, 466
bulk modulus, 369, 374
canonical equations, 29, 30
Carathéodory theorem, 16, 26, 32, 172, 216, 463
chattering boundary, 97
chattering control, xxii, 7
checkerboard structures, 65, 74, 465
classroom use, xxv
coated circles, 55, 56, 189, 253, 254, 283, 384, 427, 493
coated cylinders, 288
coated ellipses, 57, 283
coated sphere, axially symmetric anisotropic material, 294
coated spheres, 55, 58, 189, 198, 253, 256, 257, 283, 288, 294, 304, 307, 310, 318, 342, 387, 430, 493
comparing medium, 396, 425
comparison of nearby configurations, 239
compatibility conditions, 91, 157, 360, 376
compensated compactness, 60, 133, 214, 220–222, 376
complementary bound, 264
complex conductivity, 344
complex conductivity, first-order equations, 346
complex conductivity, minimal variational principle, 351
complex conductivity, minimax variational principle, 349, 350
complex conductivity, second-order equations, 347
complex permeability, 343
complex-valued potentials, 343
composite, xv, 46
composite variation, 328, 332, 333
composites of minimal compliance, 393
composites of minimal stiffness, 407
conductivity equations, 35
conductivity of inhomogeneous media, 35
conductivity tensor, 36
conductivity, constitutive relations, 36
conductivity, continuity conditions, 39
conductivity, differential constraints, 38
conductivity, expressions for energy, 44
conductivity, isotropic material, 37
conformal deformations, 373
conformal defects, 373
conformal invariance, 373
conjugate variables, 30
differential constraints, 148–150
differential scheme, 183, 186, 318, 452, 453
differential scheme, linear equation, 184
diffusion equilibria, 35
dilute composite, 241, 242
Dirichlet problem, 38
Dirichlet variational principle, 43
discontinuity of elastic properties, 377
discontinuity of strains, 377
discontinuity of stresses, 377
damage detection, 487
defective operator, 360, 363, 376, 377, 391, 408, 475
detectability, 244
Dev-operator, 394, 404
deviator, 374
deviatoric trace, 367, 383
differential constraints, 148–150
differential scheme, 183, 186, 318, 452, 453
differential scheme, linear equation, 184
dilute equilibria, 35
dilute composite, 241, 242
Dirichlet problem, 38
Dirichlet variational principle, 43
discontinuity of elastic properties, 377
discontinuity of strains, 377
discontinuity of stresses, 377
dissipation rate, 346
dissipative media, 343
divergencefree and curlfree vectors in 2D, 105
divergencefree field, 36
diversity of optimal topologies, 341
domain of the convexity, boundary of, 9
dual form of conductivity equations, 39
dual variable, 29
duality, 29, 38, 44, 131, 352, 391
duality of variational principles, 44
dyadic product, 71, 147
effective medium theory, 55
effective properties tensor, 46
effective tensor of elastic laminates, 380
effective tensor, calculation, 50
effective tensor, calculation by variational approach, 61
effective tensor, elastic composite, 379
effective tensor, laminates of two conducting materials, 51
effective tensor, optimal eigenvalues, 128
effective tensor, optimal orientation, 128
effective tensor, properties, 49
effective tensor, variational approach, 59, 60
eigenbasis, 370
eigenstrain, 321, 322, 325
eigentensor, 370, 396, 423
eigenvalue optimization, 487
elastic energy, 378, 379
elasticity, continuity conditions, 377
elliptical inclusion, 242
elliptical system, 375
ellipticity, 162
equilibrium of stresses, 361
equivalence of elasticity tensors, 372
equivalence of topologically different constructions, 342
equivalent nonlinear elastic material, 395
errata list, xxv

Euler equation, 12, 14, 15, 26, 28, 29, 33, 42, 60
Euler equation, degeneration, 23, 26–28
Euler equation, vector-valued minimizer, 13
Euler–Lagrange equation, 11, 42, 43, 60, 104, 130, 151, 161, 162, 170, 219, 347, 349, 350, 379, 391, 483, 484, 486
Euler–Lagrange equation, degeneration, 87, 162, 462, 463
evolution, xxiv
exact relations, 293, 303, 305, 424
existence of a solution to a variational problem, 13
existence of minimizers, 122
expanded bibliography, xxv
extended Lagrangian, 99, 246, 251
extremal material, 201, 342, 387
extremal material, availability, 206
extremal material, imitation, 204
extremal material, matrix laminates, 204
extremal material, properties, 202
extremal material, subspace of zeros, 202, 203
extreme effective properties, xix
field concentration, 46
fields in a laminate of a high rank, 195, 196
fields in laminates, 177
fields in multiphase optimal composites, 342
fields in optimal structures, 235, 236
fields in the T-structure, 196
fine-scale perturbation, 161
fine-scale perturbations, 13, 151, 158
fixed-point scheme, 456
flow in porous media, 35
forbidden interval, 15, 16, 25, 27, 96–100, 102, 106, 115
forbidden region, 19, 22, 23, 96, 99, 123, 163, 164, 239, 240, 245, 246, 249, 253, 327, 334–336
Fourier image, 221
Fourier transform, 220
fourth-order moments, 385

transport equations, 35
TrD-operator, 367, 455
TrS-operator, 367, 455
“truly periodic” structures, 283
two scales of discretization, 472
two-well function, convex envelope, 17, 18
two-well Lagrangian, 91, 133, 156, 173, 174, 176, 211, 228
two-well Lagrangian, convex envelope, 25
upper bound, attainable, 22
upper bounds of the quasiconvex envelope, 171–174, 176, 207, 239, 247, 251
variation in a strip, 92, 93, 123, 333
variation in a strip, increment, 94
variation in a strip, optimal orientation, 95
variation in a strip, variation of the field, 94
variation in a strip, Weierstrass condition, 95
variation in an ellipse, 333
variation of the loading, 479
variational inequality, 35
variational principle for the strain energy, 378
variational principle for the stress energy, 379
Vigdergauz’ structures, 283, 412, 415
viscoelasticity, 343, 355
Voigt bounds, 62
Walpole bounds, 427, 439
weak G-closure, 75, 123, 128
weak lower semicontinuity, 120
weak solution, 38
weakly continuous functionals, 119, 123
weakly discontinuous functionals, 120
weakly lower continuous functionals, 121, 122, 474
weakly lower semicontinuous functionals, 120
Weierstrass condition, 152
Weierstrass conditions, 12, 81, 99
Weierstrass test, xx, 7, 10, 12, 14, 15, 19, 22, 23, 27, 32, 92, 99, 102, 104, 107, 123, 151
Weierstrass test, minimax problem, 105, 106
Weierstrass test, neutrality, 100, 247
Weierstrass test, vector-valued minimizer, 13
Weierstrass variation, 12, 28, 99, 102, 151–153, 240, 247, 325
Weierstrass-type condition, 93, 123, 151, 152, 154, 241, 243, 325
Weierstrass-type variation, 164, 242
weighted translation method, 340
wheel optimal, 493, 494
Wiener bounds, 61, 62, 69, 127, 169, 193, 292, 310, 311, 354, 355, 421, 424
Wiener box, 74, 193, 194, 263, 280, 283, 311, 312, 315, 316, 340
Y-transform, 193, 267, 284, 288, 301, 426, 429, 430
Young measures, 164
Young modulus, 371, 480
Young–Fenchel transform, 30, 31, 131
zigzag curve, 20
