

Math 3900, Spring 2009
Exit survey

Dear students of Math 3900,

I had fun teaching you. You were a really terrific class. I hope you enjoyed it and learned something interesting, new, and maybe even something you will recall in future.

As I promised, here are a few questions. I would greatly appreciate if you take the time to answer any of them as it will help in planning this course in the future.

1. Your opinion about the class format (lectures/computer sessions)? Handing in homework just before you have to work on another one?

2. Any opinion about the homeworks (level? length?) If there were any particular ones that you loved or hated, let me know.

3. Mathematical topics covered - opinion? would you like to see something else? different? not to see something?

4. Biological topics covered - what do you think about the selection? Anything you would suggest?

5. In general - what would you change in this class, and what definitely to keep?

6. The book - did you like it? dislike it? would it be ok to go to all class-notes/papers/copies from random books format like we did in this class for part of semester?
