Math 6020-1, Spring 2014; Assignment 4

Assigned on Friday February 28, 2014;
Due on Friday March 14, 2014

1. Read Chapter 9.

2. Solve Problems 9.1, 9.3, and 9.26. [Hint: In R, the subrountine `factanal()` produces $\hat{\boldsymbol{L}}$ and $\hat{\boldsymbol{\Psi}}$. You might want to read about 'Varimax" and see if you can use those good rotations in R as well. Play with this one.]
