

Index

- admissible, 97
- Benjamini-Kalai-Schramm theorem, 71
- Bethe ansatz, 205, 220, 223, 241
- bigeodesic, 125
- Bonami-Gross inequality, 81
- bond percolation, 10
- Busemann function, 40, 52, 109, 143
 - exponential corner growth model, 158
- central limit theorem, 9
- CGM, 98–100, 102
 - exponential, 128
- Chaos series, 207, 216, 249
- cocycle, 110, 114, 138
 - adapted to the potential, 142
 - ergodic theorem, 120, 140
- competition interface, 46, 102, 126, 127
- competition model, 51
- concentration, 91
- configuration, 97
- corner growth model (CGM), 98–100, 102, 136
 - exponential, 128, 145
 - stationary, 146, 160
- curvature, 20, 32
- diagonal argument, 43, 50
- diffusion-limited aggregation, 2
- direction, 44
- disordered ferromagnet, 4, 40
- distinct, 43
- Eden model, 1
- edge weights, 40, 63
- Efron-Stein inequality, 73
- entropy, 79
- environment, 97
- ergodic, 111
- Falik-Samorodnitsky inequality, 79
- Fekete’s lemma, 12, 16
- Feynman-Kac representation, 213, 229
- first-passage percolation (FPP), 3, 10, 95, 98, 123
- fixed point, 114
- flat edges, 21
- fluctuation, 70
 - exponent, 176, 178
 - lower bound, 71
- FPP, 3, 10, 95, 98, 123
- Fredholm determinant, 236
- geodesic, 41, 74, 83, 96, 98, 137, 143
 - coalescence, 43, 63, 123
 - convergence, 39, 42
 - direction, 120, 122
 - doubly-infinite, 4, 125
 - finite, 41
 - infinite, 40, 42
 - merging, 43, 63
 - midpoint problem, 174
 - tree, 44
 - unique, 124
- height function, 101
- i.i.d., 103
- influence, 77
- inter-arrival, 111
- invariant measure, 129
- Johansson, Kurt, 72
- Kardar-Parisi-Zhang (KPZ)
 - equation, 204
 - exponents, 70
 - scaling relation, 28–30
 - universality, 176, 212
- Kesten, Harry, 72
- KPZ exponents, 70
- last-passage percolation (LPP), 3, 22, 96
 - point-to-level, 137
 - point-to-point, 137
 - stationary, 144
- last-passage time, 97
- lattice animals, 85
- law of large numbers
 - LLN, 8

- SLLN, 8
- WLLN, 8
- limit shape, 3, 10, 41, 57
- limiting direction, 43, 57
- LLN, 8
- logarithmic Sobolev inequality, 80
- LPP, 3, 22, 96
- Lyapunov exponent, 240

- martingale increments, 79
- mass transport, 47
- midpoint problem, 174

- Nested contour integral, 205, 226, 228
- Newman, Charles, 123, 128
- non-polygonal limit shape, 22, 24
- nonrandom fluctuation, 27, 28

- oriented percolation, 21

- Parabolic Anderson Model, 231, 240
- passage time, 97, 98
- percolation cone, 22

- queuing operator, 114

- rate of convergence, 26
- recovery, 110, 114
- Replica method, 225, 228
- Rossignol, Raphael, 87

- scaling exponents, 27–29
- scaling relation, 40
- second-class particle, 128
- Semi-discrete stochastic heat equation (SHE), 215, 226, 231, 239
- shape function, 103
 - explicit, 106, 149
 - variational formula, 140, 141, 161
- shape theorem, 11, 23, 41, 54, 61, 65, 102, 103
 - exponential corner growth model, 152
- shift, 53
- SLLN, 8
- Steepest descent, 232
- Stochastic heat equation (SHE), 205, 206
 - semi-discrete, 215, 226, 231, 239
- strict convexity, 3, 19, 21
- subadditive ergodic theorem, 12, 15, 70, 104
- subadditivity, 84
- superadditivity, 98

- Talagrand, Michel, 76
- TASEP, 24
- Tracy-Widom distribution, 4, 72, 129, 240, 249

- uniform (distribution), 89
- unigeodesic, 42
- up-right, 97
- weights, 97
- WLLN, 8
- work load, 114
