

Group Project

Form a group of 5-7 students and fill in this information. The group leader must email me (at macarthur@math.utah.edu) the (1) team name, (2) list of students in the group, and (3) the chapter/topic you will presenting for your project. The group leader will also need to set up a short meeting with me to go over the mathematics your team will present (without giving away the whole presentation).

The goal of this project is two-fold: to delve a little deeper into one of the chapters covered in this class and thereby increase your understanding, and to have fun (& make me laugh). :) Your group will have 5 minutes to present your project in front of the entire class. (I will rudely cut you off at 5 minutes to ensure every group gets their turn on project day, so please make sure you stay within that limit.) In order to get full credit, each person in your group must participate.
