

Math 1070  
Exam 2

Name : \_\_\_\_\_

**No outside materials allowed except pens or pencils and a calculator. You have all class period to finish the test. Remember to label all graphs, plots, and charts. SHOW ALL WORK.**

Some things you might want to keep in mind :

$$\text{if } X \sim \text{binom}(n, p) \text{ then} \quad P\{X = k\} = \left( \frac{n!}{k!(n-k)!} \right) p^k (1-p)^{n-k}$$
$$\hat{p} \pm z \sqrt{\frac{\hat{p}(1-\hat{p})}{n}} \quad \bar{x} \pm t \left( \frac{s}{\sqrt{n}} \right)$$

1. Jeremy has to take the Math subject test for graduation. The math department uses this test as a comprehensive exam. Let  $X$  = Jeremy's score on the Math subject test, where  $X \sim N(600, 15)$ .
  - (a) **(15 points)** Jeremy needs to score in the 11<sup>th</sup> percentile to graduate. What score does he need to graduate?
  - (b) **(10 points)** Jeremy's brother (Steven) is taking the GMAT, let  $Y$  = Steven's score on the GMAT, where  $Y \sim N(700, 12)$ . Jeremy scores 624 on the math subject test and Steven scores 714 on the GMAT. Who is smarter?

2. Let  $X$  = the number of living grandparents that a randomly selected adult American has. According to the recent General Social Surveys, its probability distribution is approximately  $P\{X = 0\} = 0.71, P\{X = 1\} = 0.15, P\{X = 2\} = 0.09, P\{X = 3\} = 0.03, P\{X = 4\} = 0.02$ .
- (a) **(15 points)** Does this refer to a discrete, or a continuous, random variable? Why?
  - (b) **(15 points)** Show that the probabilities satisfy the two conditions for a probability distribution.
  - (c) **(20 points)** Find the mean ( $\mu$ ) of this probability distribution.

3. According to *Current Population Reports*, self-employed individuals in the United States work an average of 44.6 hours per week, with a standard deviation of 14.5. If this variable is approximately normally distributed,
- (a) **(10 points)** Sketch a graph of the normal distribution and mark the following points
- 44.6
  - 40
  - the region that represents working more than 40 hours a week.
- (b) **(15 points)** Find the proportion of the self-employed who work more than 40 hours per week.

4. When the 2000 GSS asked subjects whether they would be willing to accept cuts in their standard of living to protect the environment, 344 of 1170 subjects said yes.
  - (a) **(10 points)** Estimate the population proportion who would answer yes.
  - (b) **(15 points)** Find the standard error for this proportion.
  - (c) **(15 points)** Find a 95% confidence interval for the proportion of subjects who answered 'yes' and interpret.
  - (d) **(10 points)** State and check the assumptions needed for the interval in (c) to be valid.

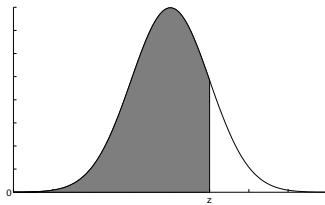

5. The following final sales prices were reported for the Palm M515 on eBay

212, 249, 250, 240, 210, 230, 195, 193.

- (a) **(15 points)** Find the point estimate of  $\mu$ .
- (b) **(20 points)** If  $s = 23.03$ , find the standard error.
- (c) **(15 points)** Find the 95% confidence interval for this data and interpret it in context.

6. A football team has probability 0.50 of winning any particular game. In a season, it plays six conference games.
- (a) **(10 points)** Using the binomial distribution, identify  $n$  and  $p$ .
  - (b) **(20 points)** Find the probability that the team wins three of its conference games.
  - (c) **(20 points)** What are the assumptions when we use the binomial distribution? Name one that might be violated in this problem.

## Cummulative Probabilities for the Standard Normal Distribution
