

## How to use WeBWorK

Homeworks will be assigned from the text at

<http://www.math.utah.edu/online/ww/1050/>

To get credit for the homeworks, you'll need to log in to WeBWorK and enter the correct answers.

There are no questions in WeBWorK, only spaces for your answers. The questions are at the end of the chapters of the text on the course webpage.

You are allowed to enter an answer an unlimited number of times until you get it right, and the assignments don't have to be completed in one sitting. They must, however, be completed before they are due.

## Step-by-step instructions

1. Go to the WeBWorK login page using the WebWorK link at

<http://www.math.utah.edu/~steffen/1050S2015/>

Login with the username and the password that was sent to your UMail account. (Please do not change your password, username, or email address. You will be responsible for emails sent to your Umail account.)

2. On the left column of the screen you'll see a box titled "Main Menu." Under that, you can click on four options: Courses, Homework Sets, Password/Email, and Grades.
  - Courses will allow you to choose another course besides this one. You probably won't need to click it.
  - Homework Sets will take you to the page that displays all the homework sets from the course that have been made available so far. (It's the default page that shows up when you log in.)
  - Password/Email will allow you to change your password and email settings, but you should not change them.

- Grades allows you to keep track of your homework progress. There will be a list of homework sets for the course that have been made available. You will see the name of the homework set, and next to that is your score. If you get a perfect score on the homework set, this number will be 1.00. The next number to the left is the total possible score for the homework (1). The next number to the left (Ind) should be ignored. The last column will have a C in it if your homework set was completed.
3. On the Homework Sets page, click on the assignment that you want to complete. (The due date for the assignment will be next to it.)
  4. Click on “Problem 1” and enter the answers into the appropriate boxes. Then select “Preview Answers” to make sure that WeBWorK thinks you wrote what you think you wrote. (This will be more important for more complicated homework sets.) If you are happy with what you see, click on “Submit answers.” WeBWorK will then tell you which of your answers are correct. If some are incorrect, try again. You have an unlimited number of attempts. Once all answers are correct, you can log out. There’s no need (and no way) to tell WeBWorK that you are done with the homework. When the due date comes, WeBWorK will check its records to see that you had the answers correct.
  5. After you click on the homework set you want to work on from the Homework Sets page, a column to the right of the screen will appear that will include a lot of tiny writing. Towards the bottom of that column of tiny words will be a blue link labeled “list of the functions.” If you click on this link WeBWorK will explain its calculator features.
  6. I’m happy to answer questions about the homework or anything else during office hours, by appointment if office hours do not work, or by e-mail (at reasonable hours). E-mails should be sent to me at <mailto:steffen@math.utah.edu>.
