List two things about the course content, materials or design that were effective for your learning, or make constructive suggestions for improvement.

- Series were the worst concept I've ever come upon. Specific Class Website would be helpful.
- The professor provided notes that were extremely helpful on the understanding of the course material.
- This was a great course. The professor went over everything slowly and was always asking if any one had any questions. The course followed the book very closely and if not, was thoroughly explained with detail.
- Lecture notes were very helpful. It allowed me to have more time listening and understanding instead of writing down all of the lecture notes frantically. Very organized instruction helped us stay on track.
- I took this class at another school, and only one person in that class passed. Needless to say, I was not one of them. I used to love math, but I was growing to hate it. This class made me rediscover my love for math. Plus, I learned so much about Calculus!!!
- Professor Zhang was very helpful in this course. He helped each student a great deal and taught the class at the speed that worked for the class the best.
- The lecture notes provided were extremely helpful, and the quizzes made sure I was studying the right things.
- It was quite a transition to go from integrals and derivatives to polar coordinates and conics. I'd prefer removing the geometry section and to go further with differential equations because it seems less jarring.
- Covered all the needed information, but was not just reading out of a math book Instructor very personable
- The book helped alot by breaking down the steps. Dali's summary notes were also extremely helpful.
- The written notes were extremely helpful to follow the lecture and were a good resource for studying. The quizzes were also very helpful to test our knowlege of the material and prepare us for the exams.
too much info in too little time

i liked how professor dali was consistent in testing us on material he had stressed in class. He is fair with the amount of homework he gives out. The only thing i would like for him to change that i think would of helped my learning would be if the homework was due before the test so then i wouldn't procrastinate.

Very good course.

professor made notes for us to review, use of study guides to prepare for exams

ZHANG,DALI: List two things about this instructor that were effective for your learning, or make constructive suggestions for improvement.

Dali Zhang has been the best instructor I've experienced in the Univeristy of Utah Math Department. He was very accomodating to all of the students in the class. He demonstrated thorough knowledge and was able to teach this knowledge to the students. His style of teaching is very organized and easy to follow along. He was an excellent instructor and would recommend him to any student. I would also recommend him to the math department for future teaching experiences.

Proff. Zhang is extreamly talented and reflects it through his lectures. His way of teaching encourages students to exceed in his class.

Professor Zhang was very effective. He was able to communicate with the students and create a great atmosphere in the class. He was always willing to help you understand the concepts that were being taught and help with the assigned homework assignments.

Very helpful and knowledgeable. He really improved my math skills. I'm so glad to have had him as an instructor. He took the time to ensure our understanding.

I would recommend him to anyone seeking to take Calculus II. My last Cal II teacher spent the whole time teaching theory. Dr. Zhang said the first day that his philosophy was not about theory but about working the problems. I have learned more about the theory and why Calculus II works from Dr. Zhang than I ever did in my last class. He is very knowledgeable, very kind, and an overall great teacher. I went from an I last year to an A+. Absolutely superb!

The professor is extremely great. He presented the material clearly and thoroughly.

He explained things very well and reviewed past conecepts when it was necessary. His accent was difficult for me at first, but it didn't take much to get used to it.

The only thing that was difficult with this professor was the language barrier. There were many occasions that I was carried away in interpretation that I wasn't able to concentrate on the content of what was being taught. This made the class more difficult than it should have been. I know that this University must pride itself on diversity which is admirable, but I am still waiting for a math course with a professor that I can understand.

Professor Zhang was a very effective instructor. I think he is aware of the difficulty some students have in understanding foreign teachers, so he made sure we all understood before going on.

Very Knowledgable Helpful and willing to admit if he made a mistake

very respectful of students and questions, good explanations

Professor Zhang was a wonderful instructor. He made the material easy to grasp by providing thorough explainations and examples of the topics. He was always available to meet for a discussion or answer questions on top of his weekly office hours. He was very considerate to students and he really wanted everyone to do well in the class.

He was very fair in his grading, and he was very organized and clear about class expectations
• Perhaps typed notes
• refreshed our memories on how to do calculations that we learned in the past, no matter how simple it may be. gave students notes that he uses to summerize what is important in the course
