

Students enrolling in MATH 1040 should be familiar with:

- manipulating variable expressions,
- calculating percentages of values,
- using a calculator to calculate expressions correctly (order of operations is important)
- working with simple linear equations,
- finding the equation of a line if 2 points are given, or if one point and a slope are given
- graphing linear functions using either two points or one point and a slope
- working with fractions, exponents, and radicals
