

1220-90 Exam 2  
Summer 2013

Name \_\_\_\_\_

**Instructions.** Show all work and include appropriate explanations when necessary. A correct answer without accompanying work may not receive full credit. Please try to do all all work in the space provided and circle your final answer.

1. (16pts) Evaluate the following limits using L'Hôpital's rule or any other method.

(a) (4pts)  $\lim_{x \rightarrow 0} \frac{x}{\cos x}$

(b) (4pts)  $\lim_{x \rightarrow 0} \frac{x \cos x}{\tan(2x)}$

(c) (4pts)  $\lim_{x \rightarrow 0^+} x \ln x$      **Hint:** Rewrite as a fraction of indeterminate type  $\frac{\infty}{\infty}$

(d) (4pts)  $\lim_{x \rightarrow 0} \frac{\sin x - x}{x^3}$

2. (8pts) Consider the sequence with first five terms given by

$$a_1 = 1 \quad a_2 = \frac{2}{3} \quad a_3 = \frac{4}{9} \quad a_4 = \frac{8}{27} \quad a_5 = \frac{16}{81}$$

Assuming the sequence continues on in this same manner, answer the following questions:

(a) (2pts) Find a formula for  $a_n$ .  $a_n =$  \_\_\_\_\_

(b) (2pts)  $\lim_{n \rightarrow \infty} a_n =$  \_\_\_\_\_.

(c) (2pts) Is this sequence convergent or divergent? \_\_\_\_\_

(d) (2pts)  $\sum_{n=1}^{\infty} a_n =$  \_\_\_\_\_ (write 'diverges' if the series diverges)

3. (11pts) In this problem, you will compute the value of an improper integral in two steps.

(a) (7pts) Use integration by parts to compute the definite integral

$$\int_0^t x e^{-x} dx.$$

**Note:** Your answer should be a function of  $t$ .

(b) (4pts) Take the limit as  $t \rightarrow \infty$  of your answer in part (a) to find

$$\int_0^{\infty} x e^{-x} dx = \lim_{t \rightarrow \infty} \int_0^t x e^{-x} dx.$$

4. (15pts) All of the following series are convergent. Evaluate them.

(a) (5pts)  $\sum_{n=1}^{\infty} 2 \left(\frac{1}{7}\right)^{n-1}$

(b) (5pts)  $\sum_{n=1}^{\infty} \frac{\cos(n\pi)}{3^{n-1}}$

(c) (5pts)  $\sum_{n=1}^{\infty} \left(\frac{3}{n+1} - \frac{3}{n+2}\right)$

5. (20pts) Determine, by whatever method you wish, whether the following series are convergent or divergent. Circle 'C' if the series is convergent or 'D' if the series is divergent. You do not need to show work.

C    D     $\sum_{n=1}^{\infty} \frac{1}{n}$

C    D     $\sum_{n=1}^{\infty} \frac{1}{1+x^2}$

C    D     $\sum_{n=1}^{\infty} \frac{7}{3^n}$

C    D     $\sum_{n=1}^{\infty} \frac{n^2}{4n^2+9}$

C    D     $\sum_{n=1}^{\infty} \frac{1}{\sqrt{n^4+1}}$

C    D     $\sum_{n=1}^{\infty} \frac{(-1)^n}{\ln n}$

C    D     $\sum_{n=1}^{\infty} \frac{n^2}{n!}$

C    D     $\sum_{n=1}^{\infty} \frac{1}{n \ln n}$

C    D     $\sum_{n=1}^{\infty} (-1)^{n-1} n$

C    D     $\sum_{n=1}^{\infty} \frac{2}{\sqrt[3]{n}}$

6. (10pts) Find the first four terms of the power series representation

$$f(x) = \frac{1}{(1-x/2)^2} = c_0 + c_1x + c_2x^2 + c_3x^3 + \dots$$

$c_0 =$  \_\_\_\_\_

$c_1 =$  \_\_\_\_\_

$c_2 =$  \_\_\_\_\_

$c_3 =$  \_\_\_\_\_

What is the radius of convergence of this power series? \_\_\_\_\_

7. (10pts) Determine whether the following series is absolutely convergent, conditionally convergent, or divergent. Show how you reached your conclusion.

$$\sum_{n=1}^{\infty} \frac{(-1)^{n-1}n}{n^2 + 1}$$

8. (10pts) Determine the interval of convergence of the series

$$\sum_{n=1}^{\infty} \frac{3^n(x-1)^n}{n!}$$
