

The Department of Mathematics and Statistics and the College of Arts and Sciences invite you to a talk in
The Undergraduate Colloquium Series in the Mathematical Sciences

Modeling the melt: What math tells us about the disappearing polar ice caps

The precipitous loss of Arctic sea ice
has far outpaced expert predictions.

Come along with Ken Golden,
the Indiana Jones of mathematics,
as he explores the mathematical
underpinnings of this mystery and takes
us on an Antarctic expedition.

Professor Kenneth Golden
(University of Utah)

Monday, September 29th, 4:30 pm
Refreshments at 4:00 pm

Cuneo 109, Lake Shore Campus
