

AUDIO STORY

The Indiana Jones of Mathematics

by Ben Harden | Length: 7:32

Share ◀

Details

Ken Golden isn't your typical mathematician. He's the Indiana Jones of Mathematics. He gets up from behind his desk, armed with mathematical theory and gets out into the world, having adventures and finding unifying math behind seemingly unconnected subjects. Today we find him out on the Arctic sea ice drawing on math developed for stealth technology to understand not only the ice, but the bones of people with osteoporosis.
