Let (f_n) be a sequence of continuous functions defined on a set S and suppose that (f_n) converges uniformly on S to a function $f : S \rightarrow \mathbb{R}$. Then f is continuous on S.</p>
<p>Corollary 9. Let $\sum_{n=0}^{\infty} f_n$ be a series of functions defined on an interval $[a, b]$. Suppose that each f_n is continuous on $[a, b]$ and that the series converges uniformly to a function f on $[a, b]$. Then $\int_a^b f(x) dx = \sum_{n=0}^{\infty} \int_a^b f_n(x) dx$.</p>	<p>Theorem 118. Let (f_n) be a sequence of continuous functions defined on an interval $[a, b]$ and suppose that (f_n) converges uniformly on $[a, b]$ to a function f. Then $\lim_{n \rightarrow \infty} \int_a^b f_n(x) dx = \int_a^b f(x) dx$.</p>
<p>Corollary 10. Let $\sum_{n=0}^{\infty} f_n$ be a series of functions that converges to a function f on an interval $[a, b]$. Suppose that for each n, f'_n exists and is continuous on $[a, b]$ and that the series of derivatives $\sum_{n=0}^{\infty} f'_n$ is uniformly convergent on $[a, b]$. Then $f'(x) = \sum_{n=0}^{\infty} f'_n(x)$ for all $x \in [a, b]$.</p>	<p>Theorem 119. Suppose that (f_n) converges to f on an interval $[a, b]$. Suppose also that each f'_n exists and is continuous on $[a, b]$, and that the sequence (f'_n) converges uniformly on $[a, b]$. Then $\lim_{n \rightarrow \infty} f'_n(x) = f'(x)$ for each $x \in [a, b]$.</p>
<p>Theorem 121. Let $\sum a_n x^n$ be a power series with radius of convergence R, where $0 < R \leq +\infty$. If $0 < K < R$, then the power series converges uniformly on $[-K, K]$.</p>	<p>Theorem 120. There exists a continuous function defined on \mathbb{R} that is nowhere differentiable.</p>
<p>Corollary 11. Suppose that $f(x) = \sum_{n=0}^{\infty} a_n x^n$ for $x \in (-R, R)$, where $R > 0$. Then for each $k \in \mathbb{N}$, the kth derivative $f^{(k)}$ of f exists on $(-R, R)$ and</p> $f^{(k)}(x) = \sum_{n=k}^{\infty} \frac{n!}{(n-k)!} a_n x^{n-k}$ $= k! a_k + (k+1)! a_{k+1} x + \frac{(k+2)!}{2!} a_{k+2} x^2 + \dots$ <p>Furthermore, $f^{(k)}(0) = k! a_k$.</p>	<p>Theorem 122. Suppose that a power series converges to a function f on $(-R, R)$, where $R > 0$. Then the series can be differentiated term by term, and the differentiated series converges on $(-R, R)$ to f'. That is, if $f(x) = \sum_{n=0}^{\infty} a_n x^n$, then $f'(x) = \sum_{n=1}^{\infty} n a_n x^{n-1}$, and both series have the same radius of convergence.</p>

<p>COROLLARY</p> <p><i>Corollary 13</i></p> <p>REAL ANALYSIS I</p>	

Theorem 123. Let $\sum_{n=0}^{\infty} a_n x^n$ be a power series with a finite positive radius of convergence R . If the series converges at $x = R$, then it converges uniformly on the interval $[0, R]$. Similarly, if the series converges at $x = -R$, then it converges uniformly on $[-R, 0]$.

Corollary 12. If $\sum_{n=0}^{\infty} a_n x^n = \sum_{n=0}^{\infty} b_n x^n$ for all x in some interval $(-R, R)$, where $R > 0$, then $a_n = b_n$ for all $n \in \mathbb{N} \cup \{0\}$.

Corollary 13. Let $f(x) = \sum_{n=0}^{\infty} a_n x^n$ have a finite positive radius of convergence R . If the series converges at $x = R$, then f is continuous at $x = R$. If the series converges at $x = -R$, then f is continuous at $x = -R$.
