<p>Assuming <math>N</math> is even, then we define the <i>spin excess</i> by</p> $N_{\uparrow} - N_{\downarrow} = 2s$	<p>These flashcards and the accompanying L<sup>A</sup>T<sub>E</sub>X source code are licensed under a Creative Commons Attribution–NonCommercial–ShareAlike 2.5 License. $N! \approx (2\pi N)^{1/2} N^N \exp(-N + (1/12)N + \dots)$	$g(N, s) = \frac{N!}{(\frac{1}{2}N + s)!(\frac{1}{2}N - s)!} = \frac{N!}{N_{\uparrow}! N_{\downarrow}!}$
<p>The fundamental assumption of statistical mechanics is that in a closed system, each of its <i>accessible</i> states is <i>equally likely</i>.</p>	$G(N, s) \approx (2/\pi N)^{1/2} 2^N \exp(-2s^2/N)$
<p>Suppose that a system has some physical property <math>X = X(s)</math> when the system is in state <math>s</math>. The <i>expected</i> or <i>average value</i> of <math>X</math> is defined by:</p> $\langle X \rangle = \sum_s X(s)P(s)$	<p>If <math>s</math> is a state of a system, then the probability of that state is given by:</p> $P(s) = \begin{cases} 1/g & \text{if } s \text{ is an accessible state} \\ 0 & \text{otherwise} \end{cases}$ <p>The sum of the probabilities over all states is unity.</p> $\sum_s P(s) = 1$
<p>If two systems are in thermal contact, the condition for them to be in <i>thermal equilibrium</i> is the following:</p> $\left(\frac{\partial \sigma_1}{\partial U_1}\right)_{N_1} = \left(\frac{\partial \sigma_2}{\partial U_1}\right)_{N_2}$	$\sigma(N, U) \equiv \ln g(N, U)$

$$\frac{1}{T} = \left( \frac{\partial S}{\partial U} \right)_N$$

$$S = k_B \sigma$$

$$\frac{1}{\tau} \equiv \left( \frac{\partial \sigma}{\partial U} \right)_N$$

$$\tau = k_B T$$

$$k_B = 1.381 \times 10^{-23} \text{ J/K}$$

The multiplicity function for a simple harmonic oscillator with three degrees of freedom with energy  $E_n$  is given by

$$g(n) = \frac{1}{2}(n+1)(n+2)$$

where  $n = n_x + n_y + n_z$ .

The multiplicity function for a Hydrogen atom with energy  $E_n$ , is given by

$$g(n) = \sum_{l=0}^{n-1} (2l+1) = n^2$$

where  $n$  is the principal quantum number, and  $l$  is the orbital quantum number.
