	Question: Comments on course effectiveness
	good
	Kelly is kind and compassionate really cares for students. She is incredibly organized and makes herself always available to students.
	Hands down the best math class I've ever taken. Kelly did a great job of outlining assignments and giving review problems for the tests. Tests were also explained well and if I did the review, I had a great chance to succeed on the test.
	I really liked the in-class practices and examples, that helped me out a lot. However, I don't think the flipped classroom was very beneficial to me.
	Daily quizzes, online lectures.
	I found the lecture videos extremely useful as well as the way in which we were taught concepts and then immediately allowed to use them in small groups in order to solidify the ideas.
	Best math class I have ever taken. I learned so much about mathematics and my individual learning style.
	Group discussion and lecture videos were helpful, but need more instruction in class.
	Pre-recorded lectures!!! Doing math problems in-class
	The flipped classroom environment was very helpful, as was all of the content available online (including class notes, lecture videos, and post notes in particular).
	Lecture Notes! Lecture Videos!
	The videos were extremely helpful and the group portion on the tests made the tests less stressful and more beneficial to my learning.
	Weekly assignments and daily quizzes were great to practice the subject
	n/a
	quizzes and videos
	I personally don't like the flipped classroom structure for teaching
	The daily quizzes and weekly assignments helped me practice the concepts without being overwhelming. The group portions of exams were also helpful.
	reverse-classroom was very effective, homework assignments were given in just the right amount to encourage learning and at the same time not feel too overwhelming
	I didn't like the full flipped class. I feel it was an adapted half flipped, half regular class, it would be a lot more successful. Plus I would have liked easier mandatory homework along with the harder weekly assignments.
	Everything. This is the best class I have ever taken, and Kelly has the best ways to teach calculus.
	Daily quizzes were super helpful. We should get more room for work on the Weekly Assignments though.
	The organization and dependability of the assignments, quizzes, etc. allowed me to plan ahead and know exactly what to expect and when.
	The way that the course was organized was fantastic; we focused on doing problems in class, and the environment was perfect. Her videos were very clear and helpful, and she was so engaged in class--that really motivated me to engage in return. This was easily the best math class I've ever taken.
	Question: Instructor Comments
MacArthur	good
MacArthur	Kelly is very approachable if you have a question she will guide you through it till you understand. She invests so much of her time in students and it definitely shows. Kelly's video recorded lectures were so helpful and easy to access.
MacArthur	Kelly was consistent to encourage many students to answer questions. She cared about each student and went out of her way to learn everyone's names. She's awesome.
MacArthur	She always helped, and she is very understanding and patient.
MacArthur	Kelly is such a brilliant professor. She really knows the subject and presents it in such a simple way. She really has a passion for Math. She wants the students to succeed but she won't let you pass the class easily.

MacArthur	She took the time and put forth effort to give her students the best chance at success. She would always take a few minutes or even a whole class period to explain or review concepts needed to understand what would be required of us. She has a great understanding that math is cumulative and that is echoed in her teaching methods.
MacArthur	Kelly did an excellent job at encouraging a constructive, participatory, and inclusive class atmosphere. She was able to teach to students of many learning types effectively, and frequently gave detailed feedback on assignments, quizzes, and tests (when requested).
MacArthur	I love that we were able to do math problems in-class, this ensures that students know that they are doing math problems correctly, and can identify and work on problem-areas Professor Kelly also makes sure students aren't afraid to fail, and therefore are more willing to try and try again until they succeed!
MacArthur	She was very approachable which was nice.
MacArthur	Kelly was the best math teacher I've had. She was always willing to help and answer any questions. She taught in a clear and easy way to understand. She was very fair in her grading and prepared us well for the tests.
MacArthur	Very good at remembering names! And great at engaging class!
MacArthur	Professor MacArthur always came to class in a great mood and made the class atmosphere great. The way the course is set up made it easy to understand what was expected of students. Kelly was always available to students for help which just made the class that much better. Hands down my favorite math class I've taken at the U.
MacArthur	Kelly MacArthur is the best teacher I've ever had. She cares about the students learning and the exams are fair (not easy).
MacArthur	n/a
MacArthur	She was extremely knowledgeable in her field. I see the importance of Math grammar but I don't think she should take off points for it.
MacArthur	Professor MacArthur was incredibly inclusive, respectful, and open to mistakes. She helped me and my classmates learn from each other, but in a very kind way. I was not afraid to raise my hand and ask questions, because I knew they would be received openly and intelligently.
MacArthur	The reverse lectures were wonderful. We could watch and re-watch the videos if the concepts did not make sense. She also highly encouraged us to speak up, ask questions, and make comments. It also helped that she knew us by name.
MacArthur	Kelly was awesome and it was inspiring to have a female math instructor that was so knowledgeable about the subject. She was super nice if not a little eccentric. I hated how she didn't give midterm reviews. I felt it made the class unfair, because retaking students and math fluent student knew what to expect, but I had no idea what problems were going to be on the test til the last minute or on the actual test. She would strongly hint, and more than anything it was annoying, if you're going to tell us what's on it anyway, tell us a week or two in advance so we know exactly what to prepare for. Also this would help not to feel so overwhelmed, having a few concrete things to focus on... I think overall this would help me to excel at a majority of the ideas instead of pass all of the ideas.
MacArthur	Out of every single teacher I have ever had in my entire life, Kelly is the best. I have never felt more included, more loved, more comfortable in a class before. I wish this semester wasn't over only because I won't have Kelly as a teacher again. I have learned so much about Calculus and have very much so enjoyed it. If there is any way that the department can teach the same way Kelly does, more grades will go up and more students will enjoy learning and loving math or whatever the subject is. I strongly suggest looking at what Kelly does and do the same because she is absolutely amazing and I am 100% not the only person who thinks this.
MacArthur	She was just a likeable person who clearly knew the concepts and did her best to help students succeed.
MacArthur	she was always willing to provide extra support for when I was struggling with an assignment/problem, content was presented in a well-thought out manner throughout the semester
MacArthur	Genuinely cared about students. Tries her best
MacArthur	She was focused on teaching us, and she made that explicitly clear in what she said and did. She was so kind, and firm, and she challenged us. I felt like she had high expectations, but she was also always patient with our questions, teaching to our understanding, never in a hurry. It was about us learning, not about her resume; she's wonderful, and all teachers need to pattern their classrooms and courses after her.
MacArthur	she looked at us like we were humans and knew everyone's name. went above and beyond to be a great teacher and better person. every person who takes her class loves her.
